. -- ShowFile.exe [filename] . DisplaySettings inside a file specified on the command line. . -? -- ShowFile.exe -? . Shows the help menu and this description. . [Click here to view the forum topics related to ShowFile!](#) Title: ShowFile - Display settings inside a file Post by: plivy Date Posted: January 30, 2005 at 3:31am I have just downloaded this application and I must say that it is the best that I have found so far. It is incredibly simple and I have found a problem with it though. I tried to use it to display the settings for a game (sadly, not supported at the moment). I copied the exe to the games directory and it worked great (showed settings for the game). But when I move the exe to a different directory (including a game subdirectory), it does not work anymore. I have verified that the copied file is in the right location and it's a 64 bit version too. Is this an issue that has been solved already, or am I doing something wrong? Title: ShowFile - Display settings inside a file Post by: cschneid Date Posted: March 28, 2005 at 11:34am Hi plivy, Just a couple of things: * have you tried running it with parameters? Try for example "ShowFile Showfile.exe c:\mypath\myfile.txt" * are you sure you have included the executable in the directory where the settings file is located? If you used the above command and if you used ShowFile.exe from the command line, you should have received a message like this Sorry to say, but I don't know how it will look like, but the application I had in mind (for games) looks like this: I guess you need to mention what you use exactly as parameters. For example, if you need a settings file named "myfile.txt" that is located in a subdirectory named "MyGames", the command should look like this: * have you tried running it with parameters? Try for example "ShowFile Showfile.exe c:\mypath\myfile.txt" * are you

ShowFile Activator

ShowFile Activation Code With Keygen [32|64bit]

ShowFile displays a dialog containing information about the settings in a file. ShowFile will search the current working directory for any files with .ini extensions. The settings are displayed in a dialog. The .ini file contains a description of the settings that can be manipulated. The description will also contain information about the capabilities and limitations of the application. ShowFile.EXE is developed by Douglas Smith, at the University of South Carolina in Columbia, SC. Installing ShowFile.EXE is distributed as a single executable file. To install the program, copy the ShowFile.EXE file to the directory where you want to run it. The settings files are located in: C:\Program Files\Microsoft Visual Studio C:\Program Files\Microsoft Visual Studio\Common\Dialogs\Any CPU>ShowFile.exe Parameters: Notes: Display Type Specifies what type of display of settings is to be used. - "ListView": Creates a dialog in which all settings in the .ini file are listed. - "DetailsView": Creates a dialog in which the settings in the .ini file are grouped into sections, allowing each section to be expanded. - "DetailsViewCollapsed": Creates a dialog in which the settings in the .ini file are grouped into sections, allowing each section to be collapsed. When the settings are collapsed, the sections are collapsed to a single row. Display Mode Specifies what mode to display the settings in. - "OptionStripped": Only the settings are displayed. - "OptionExpanded": Only the settings are displayed and any associated help text is displayed below the settings. - "OptionSelected": Only the settings and their selected values are displayed. - "OptionSelectedWithValues": Only the settings and their selected values are displayed and any associated help text is displayed below the settings. ShowIniSectionHeaders Specifies whether to display section headers when displaying settings. - "All": All section headers are displayed. - "Summary": Only the summary section header is displayed. ShowIni

What's New in the ShowFile?

ShowFile lets you quickly view the settings of a file. Just run ShowFile.exe on the file name. It will display all the settings that are present in the file. It will display a dialog with a list of the properties found in the file and what the current values are. The settings are displayed in an organized table of columns with the property name, type, current value, and the description. At the bottom of the dialog is a button with the text "View" that will open the file in notepad. A column for setting the "DisplayOrder" is added to the table, so you can easily sort the properties. You can view the current settings in the file by double clicking the "View" button. There is also a command line button to view the settings of a file. It is located at the bottom of the dialog in the "View" column. Files: ShowFile.exe - The application's command line syntax. ReadMe.txt - This file contains information about the application.
