The latest version of Photoshop Elements is Photoshop Elements 12. Among the many new features, there are two versions of Shape Match. One is from Adobe, and the other is a 3rd party. As described in a previous review, Photoshop Elements 12 allows you to take the software, a selected image, or multiple images, and do a quick and “automated” match. You can find the best match in a few minutes, or spend many more minutes and compare. This feature is sort of like Google’s image recognition in that something was selected and then similarities between the image and other images in the list were looked for. In the end the software displays the best match. With so many features to select from, there isn’t really any reason to look at other software, providing you have an iPad Pro and the skills to use Adobe Photoshop Sketch. I would worry about the software that a novice may use, for example, a video editor. Adobe Photoshop Sketch is a perfect example of why artists and designers should give the iPad Pro some real thoughtful consideration. Along with the Apple Pencil, the iPad Pro and Adobe Photoshop Sketch feel as though they were made for one another. The Ability to have your own folders within folders so that you can import/export various file types in one folder and have the rest of the files folder organized. This is very useful when you upload your files over a network because you can send one folder and files can be imported into it as separate files. This is not possible in Lightroom. If you are going to have more than two top level folders, simply stay at Lightroom 4 until more recent versions of Lightroom 5 are released. You can live without the new Tiles features.
