Even if Lightroom isn't your program of choice, though, you owe it to yourself to check out the new features. Adobe has a lot of them. They're definitely good ones. Lightroom 5 is worth your time. Whew, that's a long review. All I can say is, that's what happens when I described something as being very good. I do assure you, though, that I didn't look at anything other than the feature list. If I were to spend a few days with each of the major programs, I would find glaring flaws in many of them. For me, Lightroom 5 is a flat-out win. If you use it on a Mac, I don't see why you wouldn't upgrade now. **Note: Lightroom 5 is the only adjunct to Photoshop available for Windows systems. There are no Premiere Elements or Photoshop Elements for Windows. However, Adobe does offer Photoshop Lightroom Mobile and Photoshop Elements mobile apps for the iPhone and iPad.** I was trying to use my iPhone as a backup but the interface is so bad. I liked to have more control to the image adjustments and to turn off the smart previews while but the interface is so complex, so many tools to choose, complicated UI. I should not trust myself to must important work like Photoshop editing just with the simple smartphone, so I just don't get along with the iPhone. So sad! First things first, I had to activate all the new things, mainly the Pen Tool and Bridge. The number of adjustments to my liking, and I accept the grammar (I'll correct) choose the version I want. The installation took 8 minutes and I discovered some upgrades to my liking, and I was chatting with the Adobe customer support. I'll attempt, if it goes right!
