It also has improved support for popular photography sites like Dropbox, Flickr, and iPhoto. If you link your Creative Cloud account with Photoshop, you can publish and store documents to those sites, too. I value this feature because it makes it easier for me to share my work with clients, and I know that I can easily bring my artwork up on my iPod touch or other mobile device. And, given the amount of art I create, it frees up my hard disk space without any real loss of quality. There are also changes in the keyboard shortcuts. Photoshop actions and scripts can be called using the Macintosh Ctrl+click or [Command] + left-click to choose individual actions and scripts. In the current version of Lightroom, however, the Master is used to make changes to a collection, not to a single image. You can make a series of changes to a collection by using either the 'Arrange' tool, or by moving the mouse and using the keyboard. Because many changes are made using the keyboard, you don't have to rely on your mouse much. This is an important change, because it allows you to make a lot of changes with less thinking. Exposure is valued by 99.8 percent of all Adobe users more than 90 percent of the time and considered essential in only 0.2 percent of cases. Overall, compared to the histogram and the Brush, the Exposure slider has the most important role in almost all aspects of digital photography. The Exposure slider not only adjusts exposure but also brightness and color tone. As a result, whether used to improve the overall tonal balance or simply applied to "straighten out" some image details, Lightroom's Exposure control is invaluable. The Exposure slider also shows people what lies within each separate category - the reds, blues, etc. The importance of this can be seen in the type of adjustments that can be done by exposure. Many of these adjustments, such as saturation, hue and contrast, can be applied to specific parts of the image, leaving the rest untouched. However, the overall tonal balance affected could be subtle or very significant. Additionally, using the Exposure slider while using the Lightroom brush tool is most useful for trial and error, and for creating a new look to a photo. It is also easy to use in combination with ACR, since the functionality of both tools is virtually identical.

There are many Life's lessons, and what someone learns from an experience is something that develops and is reused or applied to the next set of trials and challenges. The same concept applies to photography: if you can work around the tough spots and figure out how to get past obstacles, then life will be easier for you. It's a wonderful truth about life, and if photography is your life, it applies more to photography than anything. You can start with an intermediate camera DSLR camera, such as the Nikon D5300. It's a solid camera with plenty of features to help even the least experienced photographer improve. Or you can step up with something a little higher equipped, such as the Nikon D5500, equipped with a big APS-C 24MP sensor. There are pros and cons with both of these cameras, but it all comes down to what you need.
